IN A FLASH!

IPL Treatments

Treat
**SUN DAMAGE,
AGE SPOTS & ACNE**
with nothing more than
LIGHT.

A close-up photograph of a woman's face, focusing on her eye and cheek. The text 'SUN DAMAGE' is overlaid on her cheek. The background is a soft, out-of-focus light color.

SUN DAMAGE

how does IPL
WORK?

model

Your skin continually renews itself by shedding old skin cells and replacing them with new healthy cells, but this process slows with age. The Ellman IPL System triggers skin renewal for each area treated by exposing targeted cells to light energy.

Based on your skin condition, Intense Pulsed Light (IPL) is focused and filtered to a particular wavelength. Depending on the wavelength used, IPL can resolve a number of conditions and revitalize your skin with nothing more than light.

how is IPL
DIFFERENT
than similar devices
and treatments?

The flashes of light from the IPL system revitalizes your skin and can be highly focused to resolve particular conditions without surgery.

Before and After IPL Treatment

no surgery.
no downtime.

JUST RESULTS.

AGE SPOTS

model

AGE SPOTS

model

what should I **EXPECT?**

From nothing more than light, you can expect skin that looks and feels healthier. Apex provides visible improvement of active acne, uneven pigmentation, vascular lesions, sun-damaged skin, and can even permanently reduce unwanted body hair.

As IPL treatments are gentle by nature, you can return to daily activities immediately after a 15 to 20-minute treatment session. Your clinician will determine the number of treatments after diagnosing your skin condition. Sun exposure should be avoided for several weeks before and after treatment for optimal results.

- Sun Damage
- Acne
- Age Spots
- Unwanted Hair

no surgery.
no downtime.

JUST RESULTS.
