Moderate to severe crow's feet

Before

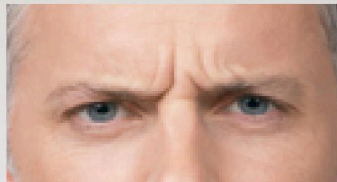

After (Day 7)

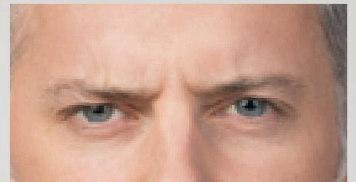

Moderate to severe frown lines

Before

After (Day 7)

Actual patient. **Results may vary.**

Photos taken at maximum frown and/or full smile before and after treatment with BOTOX® Cosmetic (onabotulinumtoxinA) at day 7. In two clinical studies for moderate to severe crow's feet, 26.1% and 20.3% of people had ≥ 2 -grade improvement at day 30. In one of these studies, 67.9% of people had mild or no crow's feet at day 30 after treatment. In clinical studies for moderate to severe frown lines, physicians assessed 80% of people had significant improvement at day 30.

Side effects associated with the injection include localized pain, infection, inflammation, tenderness, swelling, redness, and/or bleeding/bruising.

Please see Important Safety Information on pages 2, 9, and 19.
